

# LOW-CODE AI IN MATLAB

Wednesday, April 3rd | 12PM-1:30PM PDT

Data Science Building - Multipurpose Room

**Speaker: Esperanza Linares, Senior Customer Success Engineer**

Join the MathWorks team for a lunch-n-learn seminar focused on applying AI in your field without extensive programming knowledge. This hands-on session covers AI fundamentals and includes three exercises using MATLAB® tools to classify human activities.

- Accessing and preprocessing data acquired from a mobile device
- Applying clustering to the unlabeled data utilizing Cluster Data Live Editor Task
- Classifying the labeled data using two apps: Classification Learner app and the Deep Network Designer app

Bring your questions! This session will also highlight career paths for engineers and scientists – our engineers will share a bit about their personal education and career trajectory – and what technical skills can support your own career paths!

**RSVP HERE**

*\*Lunch will be provided*
